Subject: SCAT Surveys - Next Week

Follow Up Flag: Flag for follow up
Flag Status: Flagged

Good Morning Karl,

As you know, a key step in our SCAT process involves conducting well documented SCAT Surveys in each of the SCAT segments down Blacktail Creek now that ice, snow and water levels obstacles seem to be behind us. This is noted as Step #3 on page 4 of our SCAT Treatment Endpoints Document. On our conference call this past Wednesday, we extended a verbal invitation to the agencies to participate in the SCAT Surveys next week, and were encouraged to hear favorable responses from several interested agencies. We hope to assemble two teams with Meadowlark representatives, as well as representatives from State and Federal agencies.

We are planning to have a SCAT kick-off meeting this coming Monday (03/23/15) at the trailer on site, and would like to extend an invitation for any of the involved agency members to attend. This pre-SCAT assessment meeting and training would be beneficial for all parties involved as it would provide a good forum to discuss the forms, documentation, and framework we will be using to conduct the SCAT surveys. After the meeting and training, we would like to begin our SCAT surveys down Blacktail Creek from the release point (26+00 through 288+00). To be clear here, this would only cover Step #3 of 8 in the SCAT process (Assign teams and conduct SCAT surveys). We're not proposing to conduct any SCAT sign-off inspections (Step #8 of 8 in the SCAT process) on any segments from 26+00 through 288+00. The SCAT sign-off inspections (Step #8) on these segments down gradient and downstream of the release site would not be undertaken until the agencies have had ample time to review our Endpoints document and it has been issued in its final form. We only proposing to conduct the initial SCAT Surveys (Step #3) at this time, with the participation of a State or Federal agency member.

Please feel free to pass this email along to the other key stakeholders, and we hope to see them next week. For folks who do join us, they should dress for the weather and the mud, wear tall rubber/neoprene boots, bring a hard hat and safety glass (if near active construction) and may want to bring a packed lunch. Feel free to email any questions folks might have, and if possible, let us know who will be able to participate Monday so we can plan accordingly.

I understand that this likely won't work for everyone's schedule, but I wanted to make sure the offer was put out there for consideration. Have a good weekend Karl.

Andrew Parisi
